EDUCATION

•University of California, Berkeley (CDSS)

2021 – 2025

Bachelor of Arts in Data Science (Industrial Analytics Emphasis)

Berkeley, CA

Relevant Coursework: Data Engineering, Data Mining & Analytics, Probability for Data Science, Data Inference & Decisions, Principles & Techniques of Data Science, Data Structures & Algorithms.

Awards & Scholarships: Generation Change Scholar, James Hjul Scholar, Allmond Scholar, Albert Job Scholar.

TECHNICAL SKILLS

Skills/Languages: Advanced Python, Java, Advanced SQL, A/B testing, PyTorch, AWS, ETL, Advanced Statistical Analysis, dashboards (Tableau, Sigma), Git, Cloud, Bayesian Inference, API experience, Relational Databases, matplotlib, advanced Pandas CI/CD workflows, Pyspark/Spark, ML algs, Power BI, Tableau, LLM orchestration pipelines, Snowflake,

EXPERIENCE

•Qlarant

2026 – Present

Data Scientist I

Los Angeles, CA (Remote)

- Applied advanced **statistical methods**, **feature engineering**, and **model optimization** to improve predictive performance and model interpretability.
- Designed and executed **A/B tests**, developed automated **data pipelines**, and built scalable algorithms to efficiently process large and complex datasets.
- Collaborated with cross-functional teams to deploy **machine learning** solutions into production, implementing end-to-end workflows that integrated models into business operations.

•U.S. Health Department (HHS)

May 2024 – Aug 2024

Data Science Intern

Washington, D.C. (Remote)

- Developed statistical/ML models and **A/B tests** on CIL (U.S. Health Dept.Centers) funding and utilization data (2019 vs. 2022) to quantify post-pandemic underperformance.
- Helped to automate **ETL pipelines** using Python and APIs, reducing data processing time by **30%**.
- Leveraged **GCP pipelines** to **Tableau** dashboards for summarizing usage trends for non-technical decision-makers.
- Synthesized pre-pandemic and post-pandemic funding and utilization findings with executive directors, contributing statistical analyses and visualizations to a federal report scheduled for release in 2026.

•CDSS Discovery Research Program

Jan 2024 – May 2024

Lead Researcher

Berkeley, CA

- Led a research team analyzing federal reports for 350+** CIL (U.S. Health Dept.Centers), cleaning and standardizing multi-year CSVs into a state-level dataset.
- Developed ML and NLP algorithms**, correlation analysis, and visualizations (**matplotlib**, **seaborn**, **Plotly**) to relate funding, coverage, and reported achievements/challenges.
- Merged CIL data with U.S. Census disability statistics to engineer coverage and funding-per-disabled-resident metrics capturing “good” CIL performance.
- Built **Tableau** dashboards and presented findings at the 2024 CDSS Data Discovery Spring Symposium to inform discussions on HHS resource allocation and to our policy team based in Princeton (Mathematica, Inc.)

HIGHLIGHTED PROJECTS

•Causal Inference and ML (Python) for U.S. Primary Elections

Spring 2025

- Conducted **causal analysis** and **Bayesian statistics** (e.g.Propensity Score Matching) to estimate endorsement effects.
- Built and evaluated logistic regression and Random Forest models; **performed EDA on 2,600+ candidates**.
- Tuned models; best Random Forest achieved **85% accuracy** and 0.78 F1-score; presented findings using **Matplotlib/Seaborn** in a 23-page paper.

•Yelp Insights and NoSQL Data Processing with MongoDB

Fall 2024

- Queried and analyzed semi-structured JSON data from Yelp business, review, and user datasets using PyMongo.
- Designed **data pipelines** and **ETL pipelines** for aggregating and extracting user behavior insights.

•Campus Sensor Data Cleaning and Time-Series Interpolation in PostgreSQL

Fall 2024

- Standardized HVAC/ energy sensor data in **PostgreSQL**, resolving inconsistent units and building metadata tables.
- Engineered 15-minute analysis-ready time-series tables using **SQL window functions**, and outlier detection based on statistical models to fill missing readings.
- Produced clean, structured datasets used for exploratory analysis of campus energy usage.

•Predicting Streaming Service Churn with Machine Learning

Fall 2024

- Developed machine learning models (NNs, K-Means, Decision Trees) to predict churn rates with **85% accuracy**.
- Used logistic regression to model churn probability and estimate marginal effects of key engagement features.
- Evaluated models with ROC curves and AUC.
